European Community Directive
on the Conservation of Natural Habitats
and of Wild Fauna and Flora
(92/43/EEC)

Fourth Report by the United Kingdom
under Article 17

on the implementation of the Directive
from January 2013 to December 2018

Supporting documentation for the
conservation status assessment for the species:

S1015 - Round-mouthed whorl snail (Vertigo genesii)

SCOTLAND
IMPORTANT NOTE - PLEASE READ

• The information in this document is a country-level contribution to the UK Report on the conservation status of this species, submitted to the European Commission as part of the 2019 UK Reporting under Article 17 of the EU Habitats Directive.

• The 2019 Article 17 UK Approach document provides details on how this supporting information was used to produce the UK Report.

• The UK Report on the conservation status of this species is provided in a separate document.

• The reporting fields and options used are aligned to those set out in the European Commission guidance.

• Explanatory notes (where provided) by the country are included at the end. These provide an audit trail of relevant supporting information.

• Some of the reporting fields have been left blank because either: (i) there was insufficient information to complete the field; (ii) completion of the field was not obligatory; (iii) the field was not relevant to this species (section 12 Natura 2000 coverage for Annex II species) and/or (iv) the field was only relevant at UK-level (sections 9 Future prospects and 10 Conclusions).

• For technical reasons, the country-level future trends for Range, Population and Habitat for the species are only available in a separate spreadsheet that contains all the country-level supporting information.

• The country-level reporting information for all habitats and species is also available in spreadsheet format.

Visit the JNCC website, https://jncc.gov.uk/article17, for further information on UK Article 17 reporting.
Report on the main results of the surveillance under Article 11 for Annex II, IV and V species (Annex B)

Report on the main results of the surveillance under Article 11 for Annex II, IV and V species (Annex B)

Agricultural activities generating diffuse pollution to surface or ground waters (A26)  M
Active abstractions from groundwater, surface water or mixed water for agriculture (A30)  M
Drainage for use as agricultural land (A31)  M
Modification of hydrological flow or physical alteration of water bodies for agriculture (excluding development and operation of dams) (A33)  M

8.2 Sources of information
8.3 Additional information

9. Conservation measures

9.1 Status of measures
a) Are measures needed? Yes
b) Indicate the status of measures Measures identified and taken

9.2 Main purpose of the measures taken
Maintain the current range, population and/or habitat for the species

9.3 Location of the measures taken
Both inside and outside Natura 2000

9.4 Response to the measures
Short-term results (within the current reporting period, 2013-2018)

9.5 List of main conservation measures
Maintain existing extensive agricultural practices and agricultural landscape features (CA03)
Manage drainage and irrigation operations and infrastructures in agriculture (CA15)

9.6 Additional information

10. Future prospects

10.1 Future prospects of parameters
a) Range
b) Population
c) Habitat of the species

10.2 Additional information

11. Conclusions

11.1. Range
11.2. Population
11.3. Habitat for the species
11.4. Future prospects
11.5 Overall assessment of Conservation Status
11.6 Overall trend in Conservation Status
Report on the main results of the surveillance under Article 11 for Annex II, IV and V species (Annex B)

11.7 Change and reasons for change in conservation status and conservation status trend

a) Overall assessment of conservation status
No change
The change is mainly due to:

b) Overall trend in conservation status
No change
The change is mainly due to:

11.8 Additional information

12. Natura 2000 (pSCIs, SCIs and SACs) coverage for Annex II species

12.1 Population size inside the pSCIs, SCIs and SACs network (on the biogeographical/marine level including all sites where the species is present)

12.2 Type of estimate

12.3 Population size inside the network Method used

12.4 Short-term trend of population size within the network Direction

12.5 Short-term trend of population size within the network Method used

12.6 Additional information

13. Complementary information

13.1 Justification of % thresholds for trends

13.2 Trans-boundary assessment

13.3 Other relevant Information
The 10km grid square distribution map is based on available species records within the current reporting period. For further details see the 2019 Article 17 UK Approach document.
Figure 2: UK range map for S1015 - Round-mouthed whorl snail (*Vertigo genesii*). Coastline boundary derived from the Oil and Gas Authority's OGA and Lloyd’s Register SNS Regional Geological Maps (Open Source). Open Government Licence v3 (OGL). Contains data © 2017 Oil and Gas Authority.

The range map has been produced by applying a bespoke range mapping tool for Article 17 reporting (produced by JNCC) to the 10km grid square distribution map presented in Figure 1. The alpha value for this species was 20km. For further details see the 2019 Article 17 UK Approach document.
<table>
<thead>
<tr>
<th>Field label</th>
<th>Note</th>
</tr>
</thead>
<tbody>
<tr>
<td>5.7 Long term trend; Direction</td>
<td>There has been little change in habitat area from 2012 to 2017, with small differences more likely to arise from measurement errors rather than true range and population expansions or contractions (Killeen, 2013b, Killeen et al 2018b).</td>
</tr>
<tr>
<td>6.8 Short term trend; Direction</td>
<td>The populations of this species appear to be stable where they have been monitored (Killeen 2010).</td>
</tr>
<tr>
<td>6.17 Additional information</td>
<td>Vertigo species are known to undergo large annual fluctuations in population size and the peak breeding period varies considerably from year to year (Pokryszko 1990). The ability of Vertigo species to self-fertilise significantly increases the probability of survival. By self-fertilisation, the low numbers of individuals are able to reconstruct or restore a population in a few weeks, and a single coloniser is able to establish a new population (Pokryszko 1987). Given the range of protected sites where this species is present, with appropriate site management, the species should no longer be at risk of extinction (Moorkens 2011).</td>
</tr>
<tr>
<td>7.9 Additional information</td>
<td>The area of suitable habitat (permanently wet, base-rich) can often be small, no more than a few square metres (Killeen, 2013b).</td>
</tr>
<tr>
<td>8.1 Characterisation of pressures/ threats</td>
<td>Hydrological instability is the major cause of declines and losses of V. genesii populations (Killeen, 2013b, Killeen et al 2018b).</td>
</tr>
<tr>
<td>10.2 Additional information</td>
<td>There are no Scottish sites unique to Vertigo genesii, it has always been found with V. geyeri. Therefore, assessments for both species are concurrent (Killeen, 2013b, Killeen et al 2018b).</td>
</tr>
