European Community Directive on the Conservation of Natural Habitats and of Wild Fauna and Flora (92/43/EEC)

Fourth Report by the United Kingdom under Article 17

on the implementation of the Directive from January 2013 to December 2018

Conservation status assessment for the species:

S6965 - Bullhead (*Cottus gobio*)

UNITED KINGDOM
IMPORTANT NOTE - PLEASE READ

- The information in this document represents the UK Report on the conservation status of this species, submitted to the European Commission as part of the 2019 UK Reporting under Article 17 of the EU Habitats Directive.
- It is based on supporting information provided by the geographically-relevant Statutory Nature Conservation Bodies, which is documented separately.
- The 2019 Article 17 UK Approach document provides details on how this supporting information contributed to the UK Report and the fields that were completed for each parameter.
- The reporting fields and options used are aligned to those set out in the European Commission guidance.
- Maps showing the distribution and range of the species are included (where available).
- Explanatory notes (where provided) are included at the end. These provide additional audit trail information to that included within the UK assessments. Further underpinning explanatory notes are available in the related country-level reports.
- Some of the reporting fields have been left blank because either: (i) there was insufficient information to complete the field; (ii) completion of the field was not obligatory; and/or (iii) the field was not relevant to this species (section 12 Natura 2000 coverage for Annex II species).
- The UK-level reporting information for all habitats and species is also available in spreadsheet format.

Visit the JNCC website, https://jncc.gov.uk/article17, for further information on UK Article 17 reporting.
Report on the main results of the surveillance under Article 11 for Annex II, IV and V species (Annex B)

6.12 Long-term trend Direction
6.11 Long-term trend Period
6.10 Short-term trend Method used

Based mainly on expert opinion with very limited data

5.11 Change and reason for change in surface area of range

No change
The change is mainly due to:

5.12 Additional information

Bullhead are a common and widespread species across England and Wales. Recording effort for the species is relatively high, although they may be under-recorded in some habitats due to their cryptic nature, habitat preferences, crepuscular behaviour and difficulties in surveying some habitats.

6. Population

6.1 Year or period

2007-2018

6.2 Population size (in reporting unit)

<table>
<thead>
<tr>
<th>a) Unit</th>
<th>b) Minimum</th>
<th>c) Maximum</th>
<th>d) Best single value</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
<td></td>
<td>4273</td>
</tr>
</tbody>
</table>

6.3 Type of estimate

Minimum

6.4 Additional population size (using population unit other than reporting unit)

<table>
<thead>
<tr>
<th>a) Unit</th>
<th>b) Minimum</th>
<th>c) Maximum</th>
<th>d) Best single value</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

6.5 Type of estimate

6.6 Population size Method used

Based mainly on extrapolation from a limited amount of data

6.7 Short-term trend Period

2007-2018

6.8 Short-term trend Direction

Stable (0)

6.9 Short-term trend Magnitude

</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

The FRR is the same as in 2013. The value is considered to be large enough to support a viable population and no lower than the range estimate when the Habitats Directive came into force in the UK. For further information see the 2019 Article 17 UK Approach document.
6.14 Long-term trend Method used

6.15 Favourable reference population (using the unit in 6.2 or 6.4)

<table>
<thead>
<tr>
<th>a) Population size</th>
<th>b) Operator</th>
<th>c) Unknown</th>
<th>d) Method</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
<td></td>
<td>The FRP has changed since 2013. An FRP operator has been used because it has not been possible to calculate the exact FRP. The FRP is considered to be large enough to maintain a viable population and is no less that when the Habitats Directive came into force in the UK. For further details see the 2019 Article 17 UK Approach document.</td>
</tr>
</tbody>
</table>

6.16 Change and reason for change in population size

No change

The change is mainly due to:

6.17 Additional information

7. Habitat for the species

7.1 Sufficiency of area and quality of occupied habitat

| a) Are area and quality of occupied habitat sufficient (for long-term survival)? | No |
| b) Is there a sufficiently large area of unoccupied habitat of suitable quality (for long-term survival)? | Unknown |

7.2 Sufficiency of area and quality of occupied habitat Method used

Based mainly on expert opinion with very limited data

7.3 Short-term trend Period

2007-2018

7.4 Short-term trend Direction

Stable (0)

Based mainly on extrapolation from a limited amount of data

7.5 Short-term trend Method used

7.6 Long-term trend Period

7.7 Long-term trend Direction

7.8 Long-term trend Method used

7.9 Additional information

Evidence suggests that partial and permanent artificial barriers, as well as poor water quality, still preclude the bullhead returning to parts of its historic range.

8. Main pressures and threats

8.1 Characterisation of pressures/threats

<table>
<thead>
<tr>
<th>Pressure</th>

</table>

8.2 Sources of information

8.3 Additional information

9. Conservation measures

9.1 Status of measures

a) Are measures needed? Yes
b) Indicate the status of measures Measures identified and taken

9.2 Main purpose of the measures taken

Restore the habitat of the species (related to ‘Habitat for the species’)

9.3 Location of the measures taken

Both inside and outside Natura 2000

9.4 Response to the measures

Medium-term results (within the next two reporting periods, 2019-2030)

9.5 List of main conservation measures

Reduce/eliminate point pollution to surface or ground waters from agricultural activities (CA10)
Reduce diffuse pollution to surface or ground waters from agricultural activities (CA11)
Reduce impact of hydropower operation and infrastructure (CC04)
Management of hunting, recreational fishing and recreational or commercial harvesting or collection of plants (CG02)
Management, control or eradication of established invasive alien species of Union concern (CI02)
Reduce impact of mixed source pollution (CJ01)
Reduce impact of multi-purpose hydrological changes (CJ02)
Restore habitats impacted by multi-purpose hydrological changes (CJ03)
Other measures related to mixed source pollution and multi-purpose human-induced changes in hydraulic conditions (CJ04)
Adopt climate change mitigation measures (CN01)

9.6 Additional information

10. Future prospects
## 10.1 Future prospects of parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Status</th>
</tr>
</thead>
<tbody>
<tr>
<td>a) Range</td>
<td>Good</td>
</tr>
<tr>
<td>b) Population</td>
<td>Good</td>
</tr>
<tr>
<td>c) Habitat of the species</td>
<td>Unknown</td>
</tr>
</tbody>
</table>

## 10.2 Additional information

Future trend of Range is overall stable; Future trend of Population is overall stable; and Future trend of Habitat for the species is overall stable. For further information on how future trends inform the Future prospects conclusion see the 2019 Article 17 UK Approach document.

## 11. Conclusions

### 11.1. Range

Favourable (FV)

### 11.2. Population

Favourable (FV)

### 11.3. Habitat for the species

Unknown (XX)

### 11.4. Future prospects

Favourable (FV)

### 11.5 Overall assessment of Conservation Status

Stable (=)

### 11.6 Overall trend in Conservation Status

- a) Overall assessment of conservation status
  - Improved knowledge/more accurate data

- b) Overall trend in conservation status
  - Genuine change

### 11.7 Change and reasons for change in conservation status and conservation status trend

Conclusion on Range reached because: (i) the short-term trend direction in Range surface area is stable; and (ii) the current Range surface area is not less than the Favourable Reference Range.

Conclusion on Population reached because: (i) the short-term trend direction in Population size is stable; and (ii) the current Population size is approximately equal to the Favourable Reference Population.

Conclusion on Habitat for the species reached because: (i) the area of occupied and unoccupied habitat is unknown and (ii) the habitat quality is unknown for the long-term survival of the species; and (iii) the short-term trend in area of habitat is stable.

Conclusion on Future prospects reached because: (i) the Future prospects for Range are good; (ii) the Future prospects for Population are good; and (iii) the Future prospects for Habitat for the species are unknown.

Overall assessment of Conservation Status is Favourable because three of the conclusions are Favourable and one is Unknown.

The Overall assessment of Conservation Status has changed between 2013 and 2019 because the conclusion for Population has changed from Unknown to Favourable, the conclusion for Habitat for the species has changed from Favourable to Unknown and the conclusion for Future prospects has changed from Unknown to Favourable.

The Overall trend in Conservation Status has changed between 2013 and 2019 because the Habitat for the species trend has changed from increasing to stable.

## 12. Natura 2000 (pSCIs, SCIs and SACs) coverage for Annex II species

<table>
<thead>
<tr>
<th></th>

</tr>
</tbody>
</table>

### 12.2 Type of estimate
- Minimum
  - Based mainly on expert opinion with very limited data

### 12.3 Population size inside the network Method used
- Unknown (x)
  - Based mainly on expert opinion with very limited data

### 12.4 Short-term trend of population size within the network Direction

### 12.5 Short-term trend of population size within the network Method used

### 12.6 Additional information

## 13. Complementary information

### 13.1 Justification of % thresholds for trends

### 13.2 Trans-boundary assessment

### 13.3 Other relevant Information
The 10km grid square distribution map is based on available species records within the current reporting period. For further details see the 2019 Article 17 UK Approach document.
The range map has been produced by applying a bespoke range mapping tool for Article 17 reporting (produced by JNCC) to the 10km grid square distribution map presented in Figure 1. The alpha value for this species was 25km. For further details see the 2019 Article 17 UK Approach document.
